---

**A Prognostication,**  
in which you may behold the  
state of this yeere of our  
Lord God. 1607.

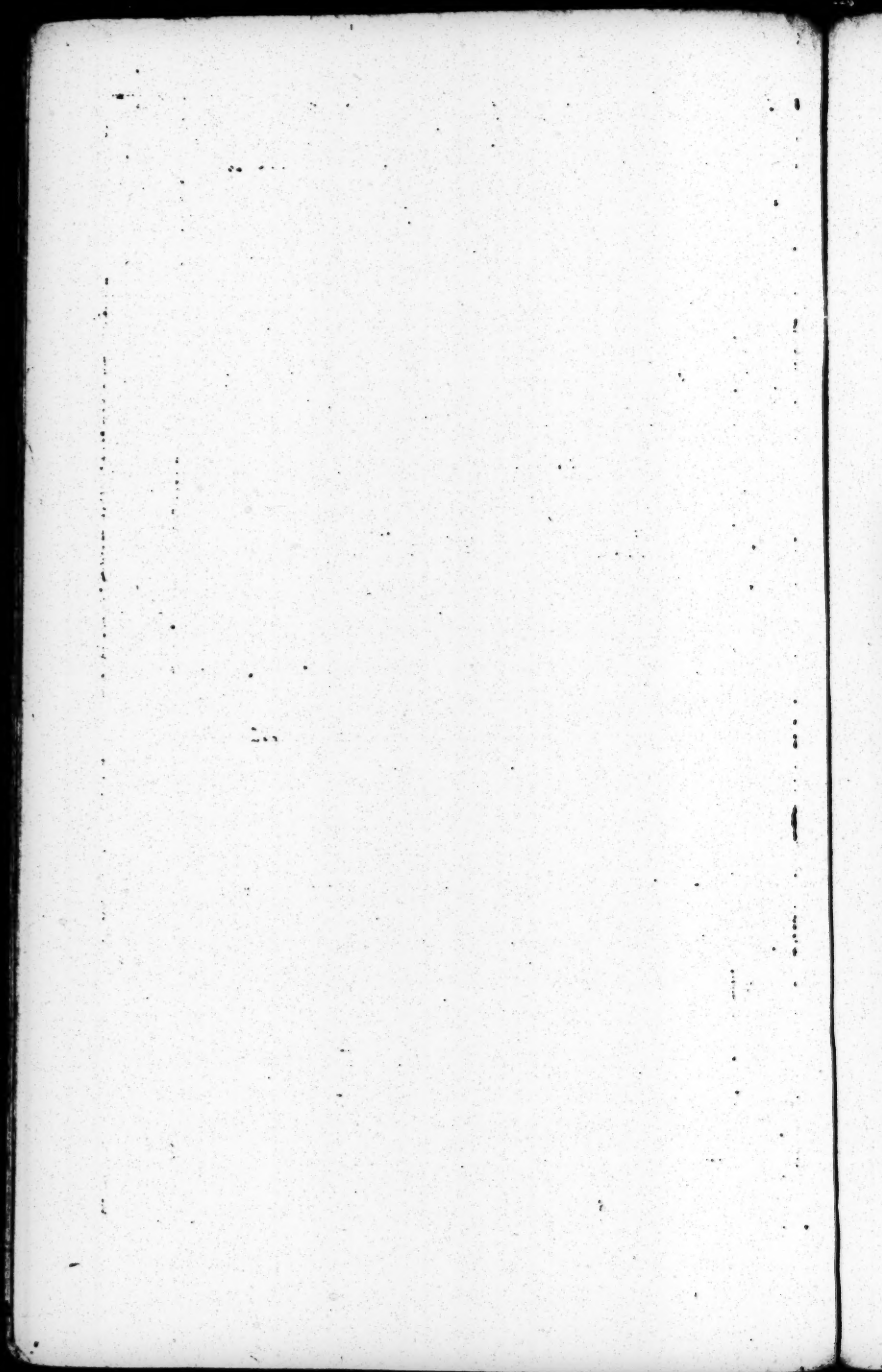

Being the third from the  
Leape yeere.

Made and set forth by *Iohn Dade*  
Gentleman, practitioner in  
Phisicke.

LONDON  
Imprinted for the Company of  
Stationers. 1607.

Dade.

1607.

## *A Description of the foure quarters of the yeere : and first of Winter quarter.*

*Sol in ♋ ♌ ♍*

**T**he vsuall winter quarter for this  
yeere of our Lord God 1607. began  
the 11. day of December, 1606. when  
the Sunne entered into the first mi.  
of Capricorne: and shal continue un-  
till the 11. of March then next ensuing. So that  
alwaies the first part of the Astronomers winter  
is in one politique yeere, and the latter ende ther-  
of in the other. This season of his owne naturall  
disposition, is knowne to be cold and moist, contra-  
ry to the qualitie of Sommer. In this quarter of  
the yeere the inward parts of a man are very hot,  
and being healthful, they may receaue great plenti-  
tie of foode, because naturall heate is now com-  
forted, for it is turned and gon inwards, and is  
there increased, and maketh digestion the better :  
How the weather will be therein disposed may be  
seene in the dayly inclination thereof.

The sicknesses of this quarter most lyke to in-  
uade and vex mens bodies, are Feuers of vi-  
uers sorts, Rewmes, Coughes, Catharrs, Hoarse-  
ness,

W.ij.

n.ij.

## A Prognostication.

ness, Paines, payne in the head and belly, payne in the thighes and knees, Dropies, weaknesse in the back, griefe in the breast, stomacke and lungs, whereof many aged persons are lyke to feele the extremitie.

### *¶ Of the second Quarter of the yeere called the Spring.*

Sol in ♈ ♉ ♊

**T**he Sunne having fully finished the winter quarter with the last part of Pisces, taketh his beginning the eleventh day of March, when the Sunne entereth into the first int. of Aries, the Equinoctiall poine, making the artificiall day equall with the night, from thence continuing untill the twelke day of June next ensuing. This season is naturallly hot and moyst, the most temperate and healthfull part of the yeere, not apt to breed sicknesse, but to bring forth such as are at other tymes bred in the bodie alreadye: The state & condition of this quarter may be seene in the daily disposition of the weather. The griefes of this quarter are these of such lyke, namely the Coughs, payne in the sydes, tertian Agues, Tooth-ache, swymming in the head, scabbies, Measells, small pox, payne in the eyes, payne in the Diaphragma, and Lungs, sundry fluxes, swelling and ache in the ioynts.

of

Dade.

1607.

## ¶ Of the third Quarter of the yeere called Sommer.

Sol in S n m

**T**he third part of the yeere called the Sommer quarter, alwaies taketh his beginning at the Sunnes ingresse into the first mt. of Cancer, causing the longest dayes & shortest night in the yeere, which is this yeere the twelfth of June, and so continue the Sommer quarter, but till the thirtieth of September next following.

This quarter according to his nature is hot and dry, and by the meanes thereof worketh alterations in the natures and bodies of men, and disperseth his humours: Touching the constitution of the Ayre herein, it may be seene in the dayly inclination of the weather.

The sicknesses of this time are generally hot fevers tertians, continuall Agues, to yong folks fluxes, spitting or vomiting blood, fluxes of sundry sores, sores in the mouth, and therabout, shortnesse of breath, painfull grippings in the stomacke and belly, and to some children hasty death,

B.ij.

Of

A Prognostication.

Of the fourth Quarter  
of the yeere called  
*Autumne.*

Sol in  $\simeq$  m  $\text{z}$

**H**Aruest otherwise called the fall of the leafe, the last part of this Astronomical yeere, being the most profitable time thereof, beginneth euermore at the time of the Summers entrance into the first mi. of the second Equinoctiall signe  $\simeq$ : which is this yeere the thirtieth of September, at which time the day and night are of equall length: The disposition of this quarter is euermore to be vnconstant and variable, by meanes whercof it is the Nurse of most sicknesses hapning in the Spring: How the weather is therein inclined, may be seene in the dayly disposition thereof.

Touching sicknesses & diseases most likely to afflict the bodie, are quartan feuers, black Jaundies, Consumptions, Dropicks, Strangurie, the Gout, small pox and Measells, with diuers other needefesse to be named, yet painfull to whom they shall happen: wherfore as well in all other quarters, as in this, haue a speciall regard to thy diet and bechaviour, for the auoyding of these and many such maladies, and haue regard to the count-  
sell

Dade.

1607.

sell of the Whistion, being ordained of God for  
the good.

*A briefe note how the sea-*  
uen Planets are placed aboue the earth  
in the Skie or vnder the earth, for euery  
month after Sunne is downe, by which  
you may perceaue how they keep their  
motion night and day all the yeere.  
Moreouer the good dayes of *Sympathie*  
touching mans Complexion and bodie  
in causes of administration, Phisicke, or  
such like: And also the euill daies ac-  
cording to the maleuolent aspects, in  
which it is daungerous to let blood,  
take vomits, Purgations, sweats, or such  
lyke attempts.

## *Januarie.*

3 And ♀ rise in the morning before the Sun.  
4 Is our euening Starre appearing in the  
west, after Sunne setting.

25. 1607.

8 Is

## A Prognostication.

¶ Is then and there like wise to be seen.

\* Is our morning Starre rising in the East,  
before the Sunne.

The first daye a pleasant day to begin the new  
yeere.

The 2. daye raw cold and cloudie, with some  
fall of moisture.

Full Moone on Saturday the third daye, at 4. of  
the clock 28. mi. in the morning.

The 3. day like to Snow.

The 4. daye windie and wet.

The 5. daye waivering.

The 6. and 7. dayes fayre.

The 8. 9. and 10. dayes close and cold weather  
like to Snow.

Last quarter on Sunday the 11. daye at 5. of the  
clock in the morning.

The 11. daye some better weather then the for-  
mer.

The 12. and 13. dayes windie with some stormes.

The 14. daye fayre.

The 15. and 16. dayes very variable and fowle  
weather.

New Moone on Saturday the 17. daye, 16. mi. be-  
fore 10. of the clock at night.

The 17. 18. 19. 20. 21. and 22. dayes cold win-  
terly weather, with fall of much moisture.

The 23. daye fresh ayre.

The 24. and 25. dayes, cold raw weather, enclie-  
ned to wynde, with Snow or fette.

The 26. and 27. dayes fayre.

The 28. 29. 30. and 31. dayes, thicke clouds, with  
some

Dade.

1607.

Some fall of moisture and rustling windes.

☉ In m. the 11. dape.

Good daies. Euill daies.

Here

Here followeth briefly, cer-  
taine rules working by *Astrono-*  
my to be had by memory, for thea-  
*noyding carriage of bookes.*

A ready way to get the Golden num-  
ber or prime without a Table.

**A**dde vnto the yere of our Lord God 1. then  
deuide the same by 19. the remaine is the  
Prime or Golden number.

The Epact is thus euer found.

**M**ultiply the Prime by 10., diuide it by  
30. the remaine is the Epact; these two  
numbers beginneth at March, their vse is  
chiefely to finde out the Change, Full Moone,  
and Quarters.

A rule to know the change,  
full, and Quarters by  
the Epact euerie moneth  
in the yeere, with-  
out booke.

**P**ut into the Epact all the moneths from  
March, including the Moneth from  
March, pull then that summe from 30. the  
remaineth sheweth the day of the Change. the  
Quarters are knowne by adding seauen  
dayes.

A rule to know the age of  
the Moone, at all times in euerie  
Moneth without booke.

**A**dd to the dayes of your moneth the  
Epact, and also as many dayes more as  
are moneths from March to your moneth,  
now substract 30. if you may, the age of the  
Moone then remaineth.

A 20-

**A notable Rule to know what Planet  
rules any houre throughout the yeere.**

| Saturne.                 | 5       | 2       | 0        | 3          | 0         | 4       | 1         | Mercury.                |
| Jupiter.                 | 6       | 3       | 0        | 4          | 1         | 5       | 2         | Luna.                   |
| Mars.                    | 7       | 4       | 1        | 5          | 2         | 6       | 3         | Saturne.                |
| Sol.                     | 8       | 5       | 2        | 6          | 3         | 7       | 4         | Jupiter.                |
| Venus.                   | 9       | 6       | 3        | 7          | 4         | 8       | 5         | Mars.                   |
| Mercury.                 | 10      | 7       | 4        | 8          | 5         | 9       | 6         | Sol.                    |
| Lun.                     | 11      | 8       | 5        | 9          | 6         | 0       | 7         | Venus.                  |
| Saturne.                 | 12      | 9       | 6        | 10         | 7         | 1       | 8         | Mercury.                |
| Jupiter.                 | 13      | 10      | 7        | 11         | 8         | 2       | 9         | Luna.                   |
| Mars.                    | 14      | 11      | 8        | 12         | 9         | 0       | 10        | Saturne.                |

**The Vse of this Table.**

**V**nder the day of your request, seeke the houre  
that ye desire, then on the left side right there=  
against shall yee see the Planet that gouernes  
that houre by day, and at the right side the Planet  
that rules by night (as thus) On Thursday the  
third houre of the day rules Sol, and the eight houre  
of the night gouernes Luna, and so of the rest.

**ATa-**

**A Table to know the length of the planetarie  
 hour, from the shortest day and longest  
 night, till the longest day and shortest  
 night, for all the yeere.**

The vse of this Table.

**K** Nowe the length of the day or night that yee  
 require by this Table proceeding in houres  
 and minutes, and therewith enter this Ta-  
 ble the houre and the neerest minute at y<sup>e</sup> head, and  
 then descend right against your houre, and there in  
 the common Angle, shall yee finde the houre and  
 minute or minutes onely that the Planet raignes  
 by the houre of the clockes.

As

Mathew. 1607.

As for Example.

**T**he 12. day of June, the day is 16. houres long and 20. minutes, wherewith I enter this Table as is shewed, and in the Angle, I finde 1. houre 22. minutes, which sheweth that a Planet that day rules an houre and a quarter, and 7. minutes of the clocke. Also the same night I finde it but 7. houres 40. minutes, wherewith I enter this Table with 7. at the Side, and 36. minutes at the head (for that is nearest) and in the common Angle I finde but onely 38. minutes, which sheweth that a planet that night rules but onely halfe an houre, and 8. minutes of the clocke, and so of the rest in order.

A Table

**A Table to know how long the Moone shineth,  
and when shee riseth and setteth throughout  
the yeere: a notable rule and worthy to be noted.**

| The age of the<br>Moone encre. | The houres<br>she shineth. | Her age<br>decreasing. |
|--------------------------------|----------------------------|------------------------|
| 1 una                          | H. m.                      | 1 una                  |
| 1                              | 0. 48                      | 29.                    |
| 2                              | 1. 6                       | 28.                    |
| 3                              | 2. 22                      | 27.                    |
| 4                              | 3. 11                      | 26.                    |
| 5                              | 4. 0                       | 25.                    |
| 6                              | 4. 49                      | 24.                    |
| 7                              | 5. 6                       | 23.                    |
| 8                              | 6. 24                      | 22.                    |
| 9                              | 7. 12                      | 21.                    |
| 10                             | 8. 0                       | 20.                    |
| 11                             | 8. 48                      | 19.                    |
| 12                             | 9. 36                      | 18.                    |
| 13                             | 10. 24                     | 17.                    |
| 14                             | 11. 12                     | 16.                    |
| 15                             | 12. 0                      | 15.                    |

The vse of this Table is thus, the age of y<sup>e</sup> Moone once known and found in the side of the Table then answering thereunto, shall yee see the houres and minutes of her shining to bee counted from the sun setting, all the increasing to the full, and til then she shineth in the euening, & after the full, she shineth before the sun doth rise, as the Table sheweth: and for rising & setting doe thus; All the increase adde to y<sup>e</sup> houres of y<sup>e</sup> sun rising, the houres found in the Table, and it sheweth the houres of her rising. Again adde to the houres of the sun setting, the houres and minutes found in the Table, & that is the houres of her setting. Then after the full for her rising, doe thus: from the sun rising take the houres found in the Table, and the rest sheweth the rising, and from the houre of the Sunne setting, take the

houres found in the Table, borrowing 12. if the Substraction cannot else bee made, and the rest sheweth the setting of the Moone.

All these aforesayd by example shall be made plaine, that euerie one may vnderstand.

**T**his yeare, the viii. day of March, the Moone is xx. daies old, wherewith I enter the Table, the Moone decreasing and I finde viii. houres answering thereunto, so I say the Moone doth shine viii. houres in the morning before the Sunne doth rise, and the same day the Sunne doth rise almost about fixe of the clocke, wherewith I put 12. else could not the subtraction be made, and it maketh 18. houres, from the which I take 8. houres, and there resteth 10. houres, so then the Moone doth rise at Ten of the clocke before midnight.

Another Example.

**T**he xxiiii. day of February the Moone is viii. daies old this yeere. wherewith I enter the Table the Moone encreasing, and I finde viii. houres answering thereunto, which sheweth that the Moone doth shine viii. houres in the evening after the Sunne is set, and the Sunne the same day doth set about fixe of the clocke, two minutes: to the which I put viii. the houres of the Table, and it maketh xiii. from which I take xii. which is midnight. and there resteth one houre, which sheweth the Moone shall set the same day at one of the clocke after midnight. Likewise the same day the Sunne doth rise at fixe of the clocke and 36. minutes,

## A Prognostication.

minutes, to the which I adde viii. and it maketh xliii. houres, and 36. minutes, from it I take xii. (for that is noonetide) and there resteth two houres and 36. minutes, so that it sheweth that at Two of the clocke 36 minutes after noone the Moone riseth, though to vs vnscene : and so of all other times.

A Rule to know what Measures be, as  
a Pace, a Furlong, a League, a  
Mile, a Degree, &c.

**A**nd to begin with the least measure, which is a Barley corne, and 3. Barley cornes out of the middle of the eare, in thickeesse maketh an Inch.

12. Inches maketh a foot.

3. foot maketh a Pace.

100. and 25. Paces maketh a Furlong.

8. Furlongs maketh an english Mile.

5. Pards and a halfe maketh a Perch or Rodde to measure Land by. The Perch or Rod, is xvi. oot and a halfe long.

160. Pearches or Roddes maketh an Aker.

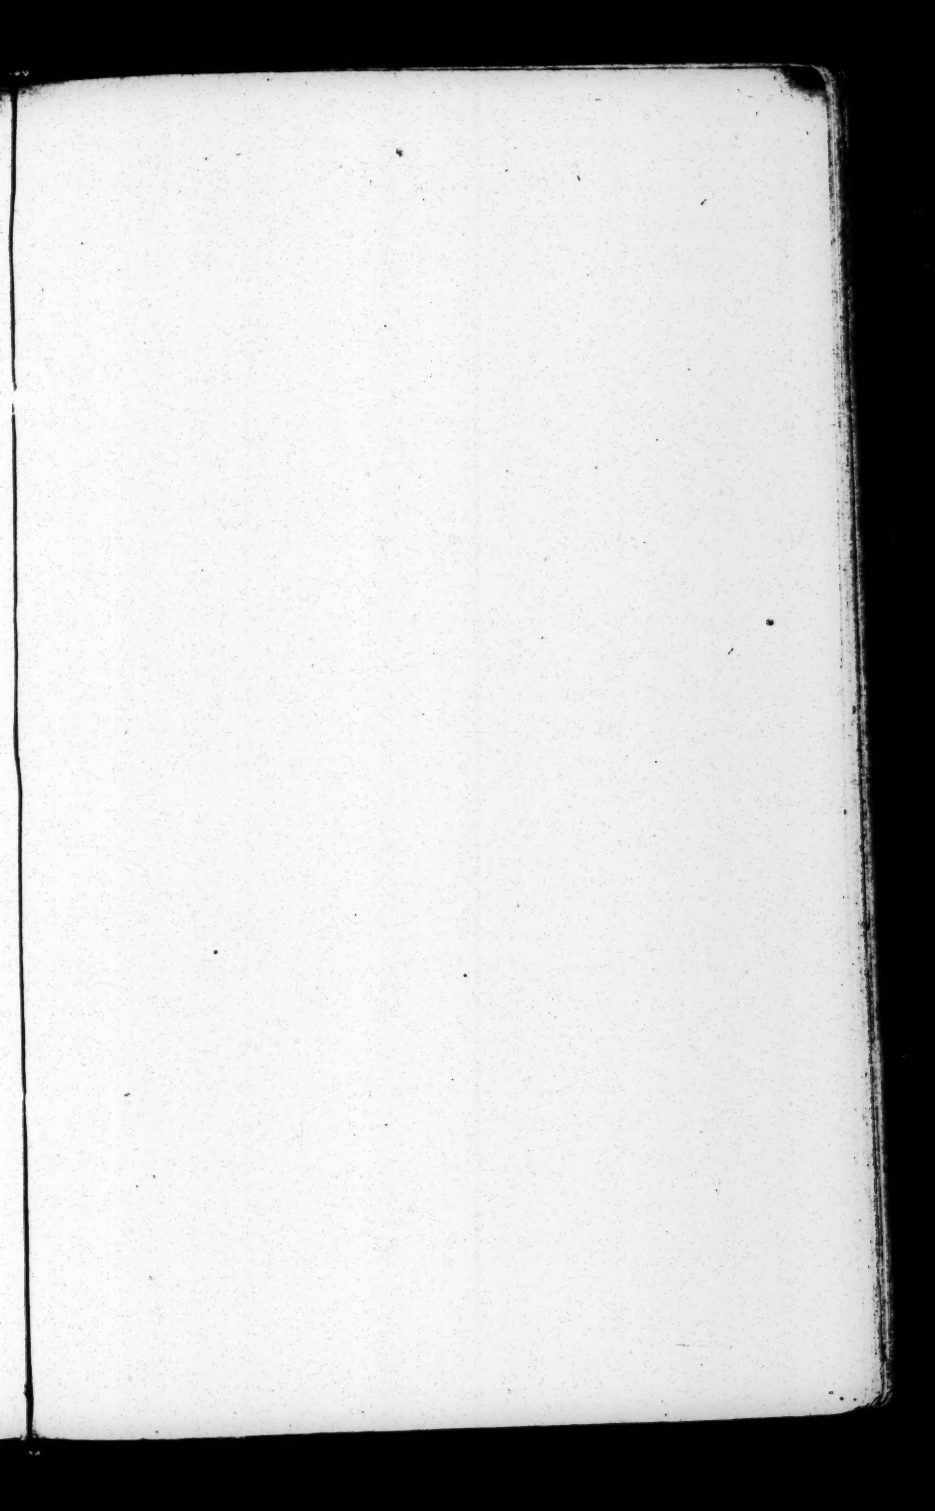

253440. Barley cornes will reach a mile

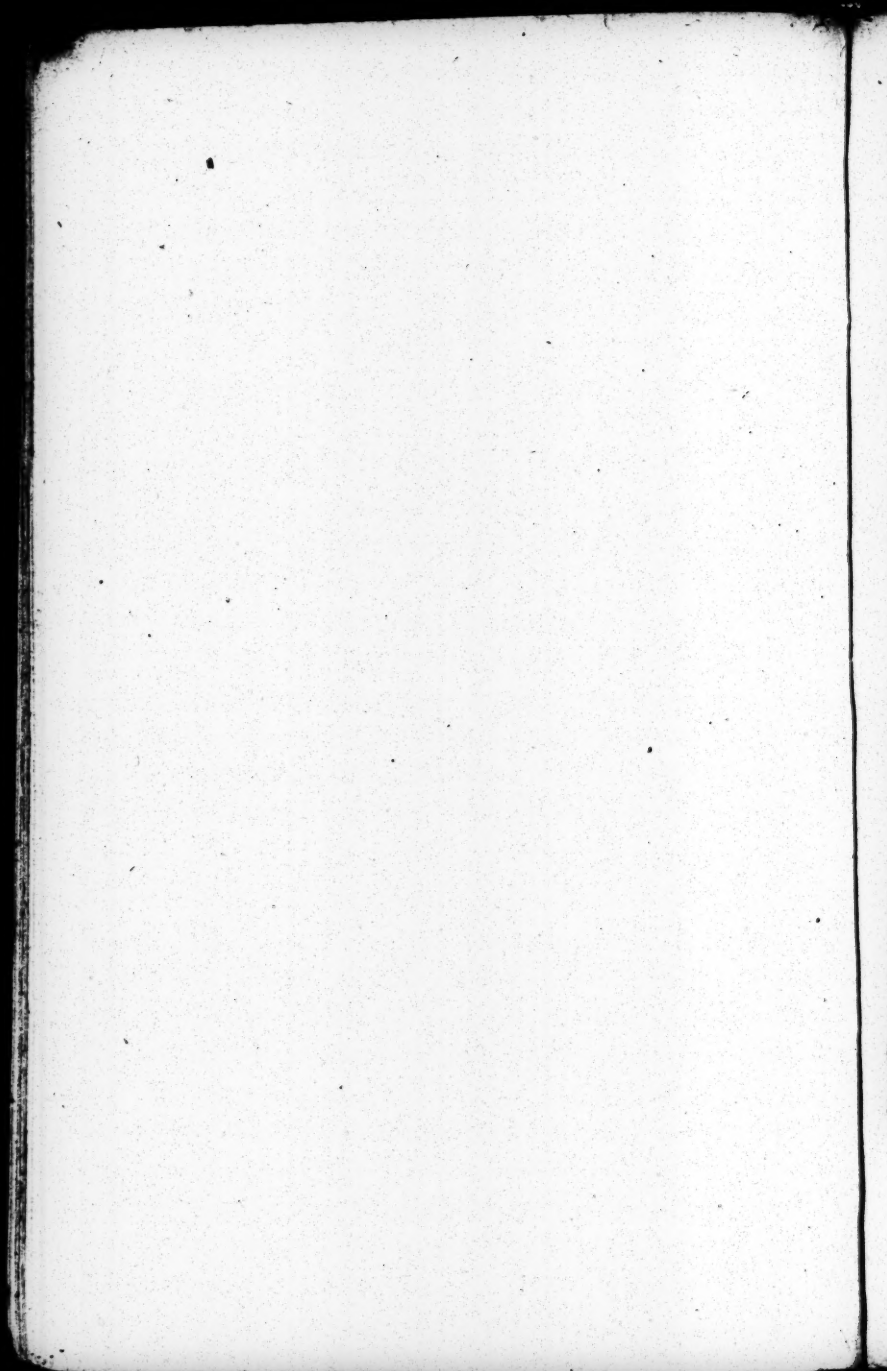

547304000. Barley cornes answere to 21600. miles, the whole circuit of the Earth.

God saue the King.

FINIS.

Mathew. 1607.

*A Prognostication*  
for the yeere of our Lord  
God, being the third from  
the leape yeare,  
1607.

Made and set forth according  
to Art, by William Mathew of  
Rigate in the county of Surrey,  
Practitioner in Physicke, and  
Student in Astronomie.

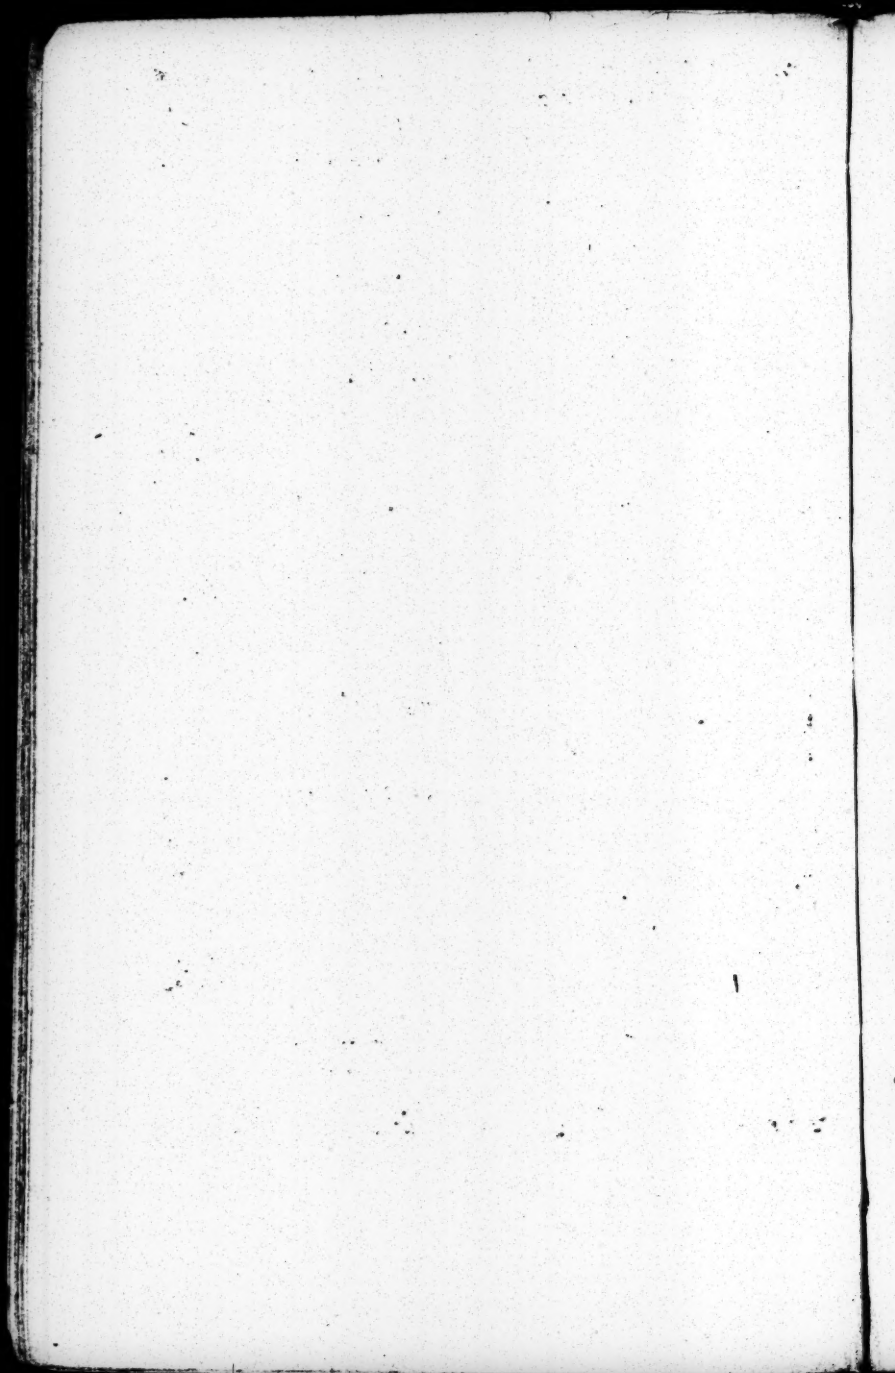

*Secreta Caelorum nemo cognoscit, nisi  
Deus.*

*Astra regunt homines, & Deus regit  
Astra.*

## Phisicall obseruations.

**C**ertaine Elections are to be chosen by the course of the Moone, in any signe of the Zodiacke, & first of Phlebotomie, or blood letting. In the Spring, let blood at the right side: and in the fall of the leafe, at the left side.

From the first quarter to the full, good for middle-age.

From the change to the first quarter, a meete time to let young people blood.

From the full to the last quarter, apt for aged folkes.

From the last quarter to the change or new Moone, best for old folkes.

The Moone  $\left\{ \begin{array}{c} \Upsilon \\ \gamma \end{array} \right\}$  For the Phlegmaticque: the head and thighs excepted.

The Moone  $\left\{ \begin{array}{c} \cap \\ \approx \end{array} \right\}$  For the Melancholique: buttocks and legges excepted.

The Moone  $\left\{ \begin{array}{c} \odot \\ \times \\ m \end{array} \right\}$  For the Cholericque: best, members and feet excepted.

**Laudable aspects of the Planets, are to be**  
observed in letting of blood, and taking  
of Purgations.

The conjunction  $\left\{ \begin{array}{c} \zeta \\ \text{♀} \end{array} \right\}$  Is the best time to let blood, so  
of the Moone that Venus be not combust, or  
with under the beames of the sunne.  
B 2 Trine

## A Prognostication.

Trine or Sextile of the Moone with  $\left\{ \begin{array}{l} \text{Saturne} \\ \text{Sol} \\ \text{Venus} \\ \text{Mercury} \end{array} \right\}$  It is good to let blood, and especially when the Moone doth apply to Iupiter and Venus.

A Quadrate of the Moone with  $\left\{ \begin{array}{l} \text{Saturne} \\ \text{Venus} \end{array} \right\}$  It is convenient to let blood, and also opposition with them is good.

Trine and Sextile of the Moone with  $\left\{ \text{Mars} \right\}$  It is reasonable good to let blood.

|                                  |   |   |                   |
|----------------------------------|---|---|-------------------|
| The Moone being in these signes. | In Cancer and with Sextile or Trine aspects.  | Of Venus it is good to purge choller. Of the sun or Mars to purge phleme. Of Iupiter to purge Melancholy. | with electuaries. |
|                                  | In Scorpio and with Sextile or Trine aspects. | Of V. to purge cho. Of the sun or Mars to purge phleme. Of Iupiter to purge Melancholy.                   | with Potions.     |
|                                  | In Pisces and with Sextile or Trine aspects.  | Of V. to purge cho. Of the sun or Mars to purge Phleme. Of Iupiter to purge Melancholy.                   | with Pilles.      |

To enter into Bathes for hot Diseases.

The Moone in  $\left\{ \begin{array}{l} \text{Scorpio.} \\ \text{Cancer.} \\ \text{Pisces.} \end{array} \right\}$  for cold Diseases  $\left\{ \begin{array}{l} \text{Aries.} \\ \text{Leo.} \\ \text{Sagittar.} \end{array} \right\}$

Mathew. 1607.

# A Description of the foure quarters of the yeere, and a declaration of the dispo- sition of the same.

## Of the Winter quarter.

**T**he Winter Quarter wherewith we usually begin the yeere, made entrance the last yeere 1606, about the xi. day of December, at which time the Sunne made his entrance into the first minute of Capricorne, then it is the shortest day in the yeere, and so the sayd Winter doth continue vntill xi. day of March next following. This part of the yeere by naturall inclination is of qualitie cold and moyst. I doe gather it will be a cold and a blustering Winter with much snow and frosts.

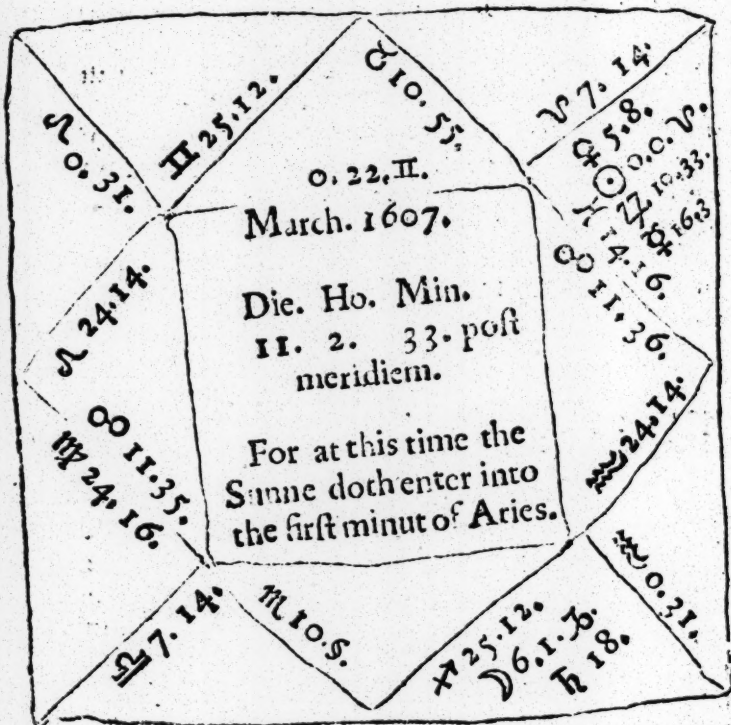

The cheefest sicknesses are these Sciatickes, melancholy feuers, sore eyes, paine in the backe and stomacke, &c.

## A Prediction of the Spring.

**T**he Spring beginneth this yeere the xi. day of March about two of the clocke 33. minutes past noone, for then the Sunne doth enter into the 1. minute of Aries: at which day he sun riseth at 6. of the clock, and setteth at 6. of the clock, so making the day and night equall throughout all the world and so the Spring contineth vntill the xi. day of June next following. This quarter is naturally hot and moyst, and the best time (as Hippocrates sayth) for to take Phisicke, for such persons that haue had long diseases in their bodie. The accidents that shall happen (as I doe find by my learning) I will make  
B 4 mention

## A Prognostication.

mention in the Harvest quarter, and also for the Summer quarter likewise: and now I will draw a celestial figure of the Heavens, at which time the Sun doth make his entrance into the first minute of Aries, as you may here behold, v:z.

Prediction

## Mathew. 1607.

### Prediction of Summer.

**S**ummer the third part of the yeere, will take his beginning the xi. day of June, for then the sunne doth enter into the first minute of Cancer, which then is the longest day, and shortest night in this yeere: Which Summer quarter will continue untill the xiii. day of September. This time by his proper nature, is hot and dry, and of the fiery triplicity. Concerning the disposition, I will set downe in the next quarter in generall, &c.

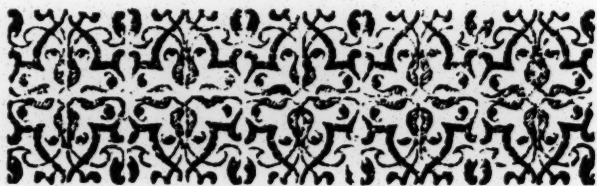

### Haruest, or fall of the lease.

**H**aruest, the fourth part of the yeere, doth take his beginning about the 14. day of September, and so continueth untill the 12. day of December then next following, for then the sunne the same day, being the 14. day of September entreth into the equinoctiall signe of Libra, for then the daies and nights be of one length. This time of yeare is drie, and cloudie. I doe thinke good to speake concerning this yeere, something according to my promise. First I doe find it will be a blustering and a sharpe Winter with much snow, and sharp frosts, & easterne winds very hurtful for yong & tender lambes, and yong cattell, the Spring very milde and temperate, great shew of fruit, yet many sharpe frosts in May, which will be somewhat in danger to the young buds and blossomes of the Apple trees, and other fruit trees. The Summer verie vnseasonable by reason of much windes, and  
suddaine

## A Prognostication.

suddaine stormes of raine and hayle. Haruest very pleasant and drie, but yet somewhat windie; there will be plentie of Corne, as Wheate, Rye and Barley, and Pease: Dates, Beanes, and Teares somewhat scantie in drie grounds. Also there will be great plentie of Wine and Oyles, and there is to be feared of a strange sickness to happen to the common people, but more dangerous to the richer sort, and there is to be feared a great Death amongst young children: and also there is to be doubted an Earth-quake to happen this yere: also great talke of newes, and there is to be feared a greuous passion of the heart and distraught of minde amongst Mercuries people. God of his mercie turne all to his pleasure and our profite, so that after this troublesome life, we may haue with him life everlasting, Amen.

Dade.

1607.

The Moone Eclipsed the xxvij dave of this mo-  
 sant August, at iij. of the clock xij. m. in the  
 morning, whose Eclipsed points bee 5. and from  
 the verie beginning vnto the ending thereof, shall  
 be about ij. houres. The effects of this ☾ Moones  
 darknesse shall begin the last dave of July, in the  
 yeere 1608. and shall continue vntill the first dave  
 of October then next ensuing. Many things  
 might here be described, as also of thother Eclips-  
 ses before, which I think meete to conceale, besee-  
 ching the Almightye to deliuer vs from all perills  
 and dangers both now and at all times. Hee ru-  
 leth the Starres and all other his creatures at his  
 gracious pleasure, and will (no doubt) turne all  
 things to the best if wee cal vpon him faithfully, to  
 whome be all praise, glorie, and power ascribed for  
 evermore. Amen.

The xxvij. xxviij. xxix. and xxx. daies windy, with  
 cloudes sending forth rayne.

The xxxi. daie moderate and good Ayre.
